AUTOMATED CONTROL SYSTEMS | AUDIO/VIDEO | SECURITY/CAMERAS | MEDIA ROOMS/THEATERS | LIGHTING AND SHADE CONTROL | WIRELESS DATA NETWORKS

EXPERIENCE THE LUXURY OF ONE TOUCH LIVING.

Imagine

Entering your home, and with *one touch...*

the lights come on like a sign of welcome, your favorite music fills the air and the thermostat resets to your personal comfort level.

Relaxing in your viewing room, and with *one tap on your iPad...*

the lights dim, the shades are drawn, the temperature adjusts to your comfort mode and your chosen movie begins to play.

Retiring for the night, and with *one touch...*

every light turns off, the alarm system activates and the temperature is set to sleep mode.

Leaving your home for a weekend getaway, and with *one touch...*

all your lighting and entertainment components turn off, the temperature adjusts, the security system arms, and at night, lights turn on and off to provide the illusion of occupancy.

That's the ETC *touch*.

Discovery and Design

At ETC, we recognize that there's no one like you – and no family like yours. Understanding what's most important to you and your lifestyle is the foundation for designing a home technology system that truly meets your unique needs. During the Discovery Phase, we learn how you live and how you envision your ideal home environment, always respecting your privacy.

During the Design Phase, ETC team members work with you, your architect, builder and design professionals to engineer reliable and easy-to-use systems. Our mission is to provide you with intuitive controls and unobtrusive systems that never compromise the aesthetics of your home.

With so many choices of systems and options available, we bring clarity to the design process by recommending the most dependable and highest quality products on the market, while working within your budget.

At Home with Our Experience

Over the past 26 years, ETC has completed more than 3,000 projects in many of South Florida's most exclusive communities. During that time, we have developed an extraordinary team of engineers, technicians and programmers. They have been chosen for their expertise, diligence and total respect for you and your property.

Our clients know that ETC stands behind our design and installation with a dedicated service department supported by a team of technical experts. We are committed to delivering exceptional service, day and night, including 24-hour emergency response every day of the year.

We're there for you when you need us most.

Achieving Peace of Mind

Creating a protected environment for you, your family and your most precious possessions is our job. Consider these scenarios:

- A video surveillance system enables you to watch the kids in the pool and play areas, see who is at a door and record all activity on your property.
- Humidity and temperature sensors notify you of unexpected environmental changes in that could impact your wine and art collections.
- Sun sensors prompt shades to close automatically to protect your artwork and fabrics from damaging sunlight.

At the end of the day, with the touch of a button, you know your doors are locked, your environment is under control and your security system is protecting you.

Beyond Going Green

While security and convenience are the focal points of ETC home technology, energy conservation offers benefits within and beyond your property walls.

Automated lighting control, motorized shades and draperies, thermostat controls and monitors reduce the overall energy usage in your home and your carbon footprint. Motion detectors add to your personal conservation effort by turning lights off, lowering shades and adjusting the temperature in unoccupied rooms.

From your car, office, or while on vacation, touch a button on your smart phone, tablet or computer to view – and even adjust – the temperature and lighting in your home.

With ETC, saving energy – and doing your part to protect the environment – has never been easier.
